

keyed alike

One key works all your locks!

Lippert Components introduces the new Keyed Alike lock system, which allows a manufacturer or dealer to standardize each RV so just one key works with every door lock. The Keyed Alike system is available on LCI's complete line of RV entry, ramp and baggage doors.

entry doors • cam locks • ramp doors • baggage doors • bar locks

In some cases, customers are leaving a dealership with up to seven different keys for one RV. It's just not practical or efficient. Changing out all those locks could cost them hundreds of dollars. This new system allows RVers to have just one set of keys for all the locks on their rig!

The Keyed Alike lock system also increases security. Now RVers won't have to worry that another camper could open their baggage doors with a standard industry key because each RV's doors will only open using its unique set of keys.
