

The diagram illustrates a network structure where a central node is connected to multiple peripheral nodes. These peripheral nodes are further interconnected, creating a dense web of connections. This type of network is characteristic of many real-world systems, such as social networks or biological networks.

QUESTION

The diagram illustrates a network structure where a central node is connected to multiple peripheral nodes. These peripheral nodes are further interconnected, creating a dense web of connections. This type of network is characteristic of many real-world systems, such as social networks or biological networks.

Option A

Option B

Option C

Option D
