## Readiness Evaluation

## Why Evaluate Readiness?

Teaching could be defined as the process of starting with what a student knows and guiding him to added knowledge with new material. While this may not be a dictionary definition of teaching, it is descriptive of the processes involved. Determining a student's readiness for PreAlgebra is the first step to successful teaching.

## Types of Readiness

True readiness has little to do with chronological age. Emotional maturity and mental preparation are the main components of academic readiness. The teacher who is dealing directly with the student is best able to determine a child's emotional maturity. All emotionally immature students may need special student training in their problem areas. A child's mental preparation can be more easily discerned with a simple diagnostic evaluation. Observing the child's attitude of confidence or insecurity while taking the evaluation may help determine emotional readiness.

## Determining Readiness

The pre-algebra Readiness Evaluation on the following pages helps the teacher to determine if student(s) are ready to begin studying math at the pre-algebra level. Complete this evaluation the first or second day of school.

The evaluation should take 45-60 minutes. It would be helpful to evaluate all of the students to determine what each student knows. However, you may want to evaluate only those student(s) who you sense have not had a thorough preparation for this course. It is especially important to evaluate any student who is using this curriculum for the first time. The student(s) should be able to complete the test on their own with the teacher making sure they understand the directions for each individual activity.

The answer key follows the test. Count each individual answer as a separate point. The total for the test is 61 points. The student(s) should achieve a score of 43 or more points to be ready to begin pre-algebra. Be sure to note the areas of weakness of each student, even those who have scored over 43 points. If the student(s) scored under 43 points, they may need to repeat a previous math level or do some refresher work in their areas of weakness. For possible review of the identified areas of weakness, refer to the chart Appearance of Concepts in the Horizons Math 6 Teacher's Guide. It will locate lessons where the concepts were taught.
