

# QUESTION 11

Which of the following is NOT a function of the cell wall?

- A. To provide structural support and protection
- B. To regulate the movement of substances in and out of the cell
- C. To store genetic information
- D. To provide a barrier against pathogens

ANSWER: C. The cell wall is primarily responsible for providing structural support and protection, regulating the movement of substances, and acting as a barrier against pathogens. Storing genetic information is the function of the nucleus.
