

### THE BATTERY

1. The battery is the source of electrical energy for the system.

2. It provides the power to start the engine and to run the electrical system when the engine is not running.

3. The battery is connected to the engine and the electrical system through the battery cables.

4. The battery is located in the engine compartment.

5. The battery is connected to the engine and the electrical system through the battery cables.

6. The battery is connected to the engine and the electrical system through the battery cables.

7. The battery is connected to the engine and the electrical system through the battery cables.

8. The battery is connected to the engine and the electrical system through the battery cables.

9. The battery is connected to the engine and the electrical system through the battery cables.

10. The battery is connected to the engine and the electrical system through the battery cables.

11. The battery is connected to the engine and the electrical system through the battery cables.

12. The battery is connected to the engine and the electrical system through the battery cables.

13. The battery is connected to the engine and the electrical system through the battery cables.

14. The battery is connected to the engine and the electrical system through the battery cables.

15. The battery is connected to the engine and the electrical system through the battery cables.

16. The battery is connected to the engine and the electrical system through the battery cables.

17. The battery is connected to the engine and the electrical system through the battery cables.

18. The battery is connected to the engine and the electrical system through the battery cables.

19. The battery is connected to the engine and the electrical system through the battery cables.

20. The battery is connected to the engine and the electrical system through the battery cables.

21. The battery is connected to the engine and the electrical system through the battery cables.

22. The battery is connected to the engine and the electrical system through the battery cables.

23. The battery is connected to the engine and the electrical system through the battery cables.

24. The battery is connected to the engine and the electrical system through the battery cables.

25. The battery is connected to the engine and the electrical system through the battery cables.

26. The battery is connected to the engine and the electrical system through the battery cables.

27. The battery is connected to the engine and the electrical system through the battery cables.

28. The battery is connected to the engine and the electrical system through the battery cables.

29. The battery is connected to the engine and the electrical system through the battery cables.

30. The battery is connected to the engine and the electrical system through the battery cables.

### IGNITION

Part	Function
Battery	Provides electrical energy to the system.
Coil	Increases the voltage from the battery to a level suitable for the spark plugs.
Distributor	Distributes the high voltage to the spark plugs in the correct sequence.
Spark Plugs	Ignite the air-fuel mixture in the combustion chamber.

The ignition system is responsible for providing the spark that ignites the air-fuel mixture in the combustion chamber. It consists of several components, including the battery, coil, distributor, and spark plugs.

The battery provides the electrical energy to the system. The coil increases the voltage from the battery to a level suitable for the spark plugs.

The distributor distributes the high voltage to the spark plugs in the correct sequence. The spark plugs ignite the air-fuel mixture in the combustion chamber.
