

### BRIDGE

The bridge is a structure that spans a body of water or a deep ravine. It is typically made of stone, concrete, or steel. The purpose of a bridge is to provide a safe and efficient way for people and goods to cross the gap. There are many different types of bridges, including suspension bridges, arch bridges, and beam bridges. Each type has its own unique design and construction methods. Bridges are essential infrastructure that connect communities and facilitate trade and travel.
