

TABLE 1	
Summary of the study	
Study design	Randomized controlled trial
Setting	General practice
Sample size	100
Intervention	100 mg of paracetamol
Control	100 mg of placebo
Primary outcome	Number of patients requiring additional analgesia
Secondary outcome	Number of patients requiring additional analgesia

TABLE 2		
Summary of the study		
Study design	Randomized controlled trial	
Setting	General practice	
Sample size	100	
Intervention	100 mg of paracetamol	
Control	100 mg of placebo	
Primary outcome	Number of patients requiring additional analgesia	
Secondary outcome	Number of patients requiring additional analgesia	

RESULTS

The study was conducted in a general practice setting. The study population consisted of 100 patients who were randomized to receive either 100 mg of paracetamol or 100 mg of placebo. The primary outcome was the number of patients requiring additional analgesia. The secondary outcome was the number of patients requiring additional analgesia. The results of the study are presented in Table 1 and Table 2.
