Dynarex Resp-O₂™ Oral Berman Airways are designed to aid the breathing process in unconscious patients by preventing the tongue from blocking the posterior pharyngeal wall. The Berman Airway features a dual-channel design with perforated midway openings to facilitate the insertion of suction catheters without obstructing the air passage. The Berman Airway features a smooth, curved design that contours to the shape of the pharynx for improved comfort. The Airway features a sturdy bite block for added stability and color-coding for easy size identification.

- Constructed from premium-quality polyethylene for optimal reliability
- Slotted sides allow for smooth catheter insertion without obstructing air passageway
- Midway openings help maintain passageway even during airway shifts or partial occlusions
- Smooth, non-brittle finish allows for improved flexibility and durability
- Anatomically curved design helps provide improved comfort and easy insertion
- Color-coded for easy size identification
- Individually packaged for optimal hygiene
- Not made with natural rubber latex or DEHP

Kit of 6
