

THE BATTERY

1. The battery is the source of electrical energy.

2. It provides a steady flow of current.

3. The battery is made up of several cells.

4. Each cell has two terminals, one positive and one negative.

5. The positive terminal is marked with a plus sign (+).

6. The negative terminal is marked with a minus sign (-).

7. The battery is used to power electrical devices.

8. It is a common source of power for many electronic devices.

9. The battery is a source of direct current (DC).

10. It is used to power devices that require a constant voltage.

11. The battery is a source of energy that can be stored.

12. It is used to power devices that are not connected to a power source.

13. The battery is a source of energy that can be recharged.

14. It is used to power devices that require a constant voltage.

15. The battery is a source of energy that can be stored.

16. It is used to power devices that require a constant voltage.

17. The battery is a source of energy that can be stored.

18. It is used to power devices that require a constant voltage.

19. The battery is a source of energy that can be stored.

20. It is used to power devices that require a constant voltage.

21. The battery is a source of energy that can be stored.

22. It is used to power devices that require a constant voltage.

23. The battery is a source of energy that can be stored.

24. It is used to power devices that require a constant voltage.

25. The battery is a source of energy that can be stored.

26. It is used to power devices that require a constant voltage.

27. The battery is a source of energy that can be stored.

28. It is used to power devices that require a constant voltage.

29. The battery is a source of energy that can be stored.

30. It is used to power devices that require a constant voltage.

CONNECTION

Terminal	Symbol	Label
Positive	+	Positive Terminal
Negative	-	Negative Terminal

The diagram shows a battery connected to a bulb. The positive terminal of the battery is connected to one terminal of the bulb, and the negative terminal is connected to the other terminal. This completes the circuit, allowing current to flow through the bulb and cause it to glow.

The battery is a source of energy that can be stored.

It is used to power devices that require a constant voltage.

The battery is a source of energy that can be stored.

It is used to power devices that require a constant voltage.
