## DIAGRAM #1

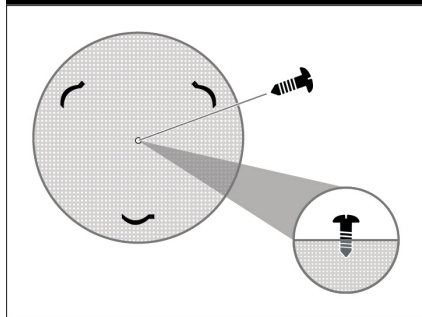

1. Begin by marking off the proper height from the floor on your wall (5'8" or 1.73m). The bottom of the u-shaped channel should be at this height. (4'6" or 1.37m for wheelchair user).

## DIAGRAM #2

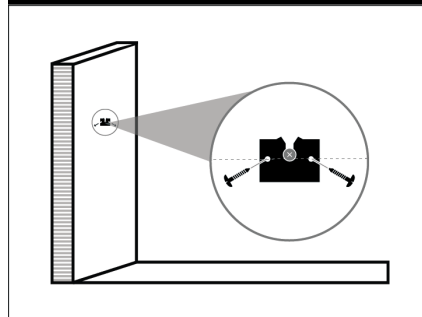

2. Apply the Mounting Feet to the backside of your dartboard, spaced evenly around the perimeter, driving the Stabilizer Screws into the proper spots.

## DIAGRAM #3

3. Drive the Dartboard Mounting Screw into the pre-drilled center hole, leaving space to hang the dartboard onto the Mounting Bracket.

## DIAGRAM #4

4. Use the two Bracket Mounting Screws to install the Mounting Bracket to your wall, using wall anchors if not positioned over a stud.
5. Place the dartboard onto the Mounting Bracket and check for tightness against the wall. If the dartboard is wobbling, remove and tighten or loosen the Dartboard Mounting Screw as needed.
