

ANATOMY

QUESTION

1. The hand is a complex structure composed of many bones. The bones of the hand are divided into three groups: the metacarpals, the phalanges, and the carpals. The metacarpals are the bones of the palm, the phalanges are the bones of the fingers and thumb, and the carpals are the small bones of the wrist. The hand is also composed of many muscles, ligaments, and tendons. The muscles of the hand are responsible for the fine motor control of the hand, while the ligaments and tendons provide support and stability.

2. The hand is a complex structure composed of many bones. The bones of the hand are divided into three groups: the metacarpals, the phalanges, and the carpals. The metacarpals are the bones of the palm, the phalanges are the bones of the fingers and thumb, and the carpals are the small bones of the wrist. The hand is also composed of many muscles, ligaments, and tendons. The muscles of the hand are responsible for the fine motor control of the hand, while the ligaments and tendons provide support and stability.

ANSWER

1. The hand is a complex structure composed of many bones. The bones of the hand are divided into three groups: the metacarpals, the phalanges, and the carpals. The metacarpals are the bones of the palm, the phalanges are the bones of the fingers and thumb, and the carpals are the small bones of the wrist. The hand is also composed of many muscles, ligaments, and tendons. The muscles of the hand are responsible for the fine motor control of the hand, while the ligaments and tendons provide support and stability.

2. The hand is a complex structure composed of many bones. The bones of the hand are divided into three groups: the metacarpals, the phalanges, and the carpals. The metacarpals are the bones of the palm, the phalanges are the bones of the fingers and thumb, and the carpals are the small bones of the wrist. The hand is also composed of many muscles, ligaments, and tendons. The muscles of the hand are responsible for the fine motor control of the hand, while the ligaments and tendons provide support and stability.
