

PSX[®] SERIES

POWER STABILIZERS

HIGH-SPEED STABILIZATION

The PSx[®] Series power stabilizers easily retract and extend with the flip of a switch. In just a few minutes, the coach will be stable, so you can spend less time setting up camp and more time enjoying your vacation. Power Stabilizers are an affordable way to upgrade to power stabilization and easily bolt on to the existing frame.

**Whenever, wherever, we
make your experience better.**

NO MORE CRANKING

PSx2® High-Speed Power Stabilizer

The PSx2 High-Speed Power Stabilizer adds several improvements to the PSx1. The dual motor design allows you to easily retract and extend the stabilizers with 50% faster operation over the competition and 30% more stable

Additional Features

- 30% more stable than previous versions of the power stabilizer
- Two motors for increased stability and reduced chances of back drive which decreases stability. Backdrive becomes more difficult when there are 2 motors instead of one.
- Sliding channel has been removed for improved operation
- 50% faster operation over the competition by utilizing one switch instead of two
- A single switch operates both motors and stabilizer legs, preventing potentially damaging frame twist which can cause several issues with the RV.
- Integrated breaker technology is designed to help prevent the user from damaging the stabilizers as well as damaging the RV itself by amping out before attempting to lift the trailer.

695602

PSx1® Power Stabilizer

The PSx1 Power Stabilizer is fast, strong, and efficient — allowing you to extend and retract your stabilizer with total ease. It can sufficiently stabilize most RVs on the market today.

Additional Features

- Power stabilizers automatically adjust to the terrain
- Better side-to-side prevention with improved braking system
- One motor independently controls both legs
- Heavy-gauge steel construction
- Durable powder coat finish
- Affordable upgrade from manual scissor jacks
- Front and rear-mount applications
