

The cell wall is a rigid structure that provides support and protection. The cell membrane is a phospholipid bilayer that regulates the movement of substances in and out of the cell. The nucleus contains the cell's genetic material (DNA) and controls its activities. The vacuole stores water, nutrients, and waste products. Chloroplasts are the sites of photosynthesis, where light energy is converted into chemical energy. The cytoplasm is the fluid medium in which organelles are suspended.

FALCETILE

The falsetto is a high-pitched voice produced by the falsetto muscles, which are located in the larynx. It is often used in music to create a unique sound.
