

Energy Management

Energy Management

Energy management is the process of monitoring, controlling, and conserving the energy used in a building. It involves a variety of techniques, including energy audits, energy modeling, and the use of energy-efficient technologies.

Energy management is a key component of sustainable building design and operation. It can help to reduce energy costs, improve indoor air quality, and reduce the environmental impact of a building.

Energy management is a key component of sustainable building design and operation. It can help to reduce energy costs, improve indoor air quality, and reduce the environmental impact of a building.
