

### THE BATTERY

1. The battery is the source of electrical energy.

2. It provides a steady flow of current.

3. The battery is made of several cells.

4. Each cell has two terminals.

5. The positive terminal is marked with a '+' sign.

6. The negative terminal is marked with a '-' sign.

7. The battery is used to power electrical devices.

8. It is a source of direct current (DC).

9. The battery is used in many applications.

10. It is a common source of power for portable devices.

11. The battery is used in many types of vehicles.

12. It is used to power the starter motor.

13. The battery is used to power the lights.

14. It is used to power the horn.

15. The battery is used to power the radio.

16. It is used to power the clock.

17. The battery is used to power the wipers.

18. It is used to power the power windows.

19. The battery is used to power the power locks.

20. It is used to power the power mirrors.

21. The battery is used to power the power seats.

22. It is used to power the power windows.

23. The battery is used to power the power locks.

24. It is used to power the power mirrors.

25. The battery is used to power the power seats.

26. It is used to power the power windows.

27. The battery is used to power the power locks.

28. It is used to power the power mirrors.

29. The battery is used to power the power seats.

30. It is used to power the power windows.

### CONNECTION

Symbol	Component
	Battery
	Bulb

The circuit is complete when the bulb is connected to the battery.

The bulb will glow when the circuit is closed.
