

### THE BATTERY

The battery is the power source for the vehicle. It provides the electrical energy to start the engine and to power the accessories. The battery is located in the engine compartment. It is a lead-acid battery with six cells. The battery is connected to the positive (+) and negative (-) terminals of the vehicle's electrical system. The positive terminal is connected to the positive (+) terminal of the battery, and the negative terminal is connected to the negative (-) terminal of the battery. The battery is also connected to the ground of the vehicle. The battery is a sealed, maintenance-free battery. It is designed to last for several years. The battery is a critical component of the vehicle's electrical system. It is essential for the proper operation of the vehicle. The battery is a lead-acid battery with six cells. Terminal	Color	Connection
Positive (+)	Red	Positive (+) terminal of the battery
Negative (-)	Black	Negative (-) terminal of the battery
Ground	Black	Ground of the vehicle

### IGNITION

Component	Function
Battery	Provides electrical energy to the ignition system.
Ignition Coil	Converts the low voltage from the battery into the high voltage needed to fire the spark plug.
Spark Plug	Creates a spark to ignite the air-fuel mixture in the combustion chamber.
