

QUESTION

1. A patient is admitted to the hospital with a diagnosis of acute myocardial infarction (AMI). The patient is currently on bed rest and receiving oxygen therapy. The nurse is monitoring the patient's vital signs and oxygen saturation. The patient's oxygen saturation is 92% on 2L of oxygen. The nurse is planning to administer morphine to the patient for pain relief. The nurse should monitor the patient for which of the following side effects of morphine?

2. A patient is admitted to the hospital with a diagnosis of acute myocardial infarction (AMI). The patient is currently on bed rest and receiving oxygen therapy.
