

QUESTION

1. A patient is admitted to the hospital with a diagnosis of acute myocardial infarction (AMI). The patient is currently in the intensive care unit (ICU) and is receiving intravenous (IV) medications. The patient's vital signs are stable, and the patient is alert and oriented. The patient's chest X-ray is clear, and the patient's electrocardiogram (ECG) shows a regular sinus rhythm. The patient's laboratory values are within normal limits.
