

SOLAR GAZING GLOBE

Review all information before using this product. Save this manual for future reference.

HOW SOLAR LIGHTS WORK

During the day, the solar panel converts solar energy into electricity and stores it in the rechargeable battery. At night, the light turns on automatically via a light-detecting sensor built into the unit. How long the light illuminates will depend on the location of the unit, weather conditions, and how much direct sunlight the panel is exposed to.

Ensure the power is switched to 'ON' while charging.

CHOOSING THE RIGHT LOCATION

Select an outdoor location where the solar panel will receive at least 6-8 hours of full, direct sunshine each day. Ensure tree, shrub, or building shadows do not cast shade over the solar panel throughout the day as this will influence the charge of the battery and shorten nighttime illumination.

Avoid locations with strong nighttime light sources, such as street or porch lights; the solar light will not illuminate if the light-detecting sensor receives too much ambient light.

RECHARGEABLE BATTERY

The battery, like all rechargeable batteries, has a limited life span, and becomes less efficient with repeated charge/discharge cycles. As the capacity of the battery reduces, so does the operating time, and the battery will need replacing.

IMPORTANT: Only use compatible rechargeable batteries; incompatible alternatives may damage the system and will void the warranty.

USE & CARE

- The solar feature is designed for outdoor use only.
- Keep the solar panel clean by wiping it down with a damp cloth. Clean solar panels will absorb more sunlight.
- Check for water accumulation inside the globe on a regular basis, especially after rain and temperature changes that cause condensation.
- Do not use chemicals or abrasive materials to clean the unit.
- Do not allow the gazing globe to freeze as it may cause the globe to crack or break; store indoors.
- Do not let the solar panel freeze as it will damage the unit. Store the solar panel in a warm, dry location.

 This product uses a rechargeable battery. When the battery can no longer be used, it should be removed from the unit and recycled. The battery must not be incinerated or composted. Recycle the battery in accordance with local laws and regulations.

Any modification to the product or failure to follow recommended care will void the product warranty.

If the product was damaged during shipping, please contact our customer service team through one of the methods mentioned at the top of page 1. Please have the item number and order information ready to expedite response time.

⚠️ WARNING: Manufacturer and seller expressly disclaim any and all liability from personal injury, property damage or loss, whether direct or indirect, or incidental, resulting from the incorrect attachment, improper use, inadequate maintenance, or neglect of this product.

OPERATION

1. Turn the power switch on the solar panel 'ON'.
2. Place the solar glazing globe in a location that will receive 6-8 hours of full, direct sunlight.
3. First Time Use: The solar panel will require at least 8 hours of full and direct sunlight to charge the battery. Make sure the unit is turned 'ON' while charging.

CLEANING

1. Remove the solar panel and gently wipe it off with a soft cloth.
2. Clean the inside and outside of the gazing globe with mild detergent, warm water, and a soft cloth.
3. Rinse thoroughly with clean water and allow the globe to completely dry before replacing the solar panel.

REPLACING THE BATTERY

1. Turn the solar panel 'OFF'.
2. Remove the battery cover and gently remove the battery.
3. Paying attention to the positive and negative terminals, gently insert a new battery.
4. Replace the battery cover.

TROUBLESHOOTING

- Ensure the power button is in the 'ON' position. The battery will not charge if the panel is switched off.
- This product was designed to only work at night, make sure the light sensors are not receiving too much ambient light.
- If the light only works for a short period of time, attempt a 'Boost Charge':
 - Turn the power 'ON' and let it charge in full, direct sunlight for at least 8 hours.
 - Turn the power 'OFF' at night to conserve the battery.
 - Repeat this process for 2-3 days. If the unit still does not work, the battery may need replacing.
