

MINI GARDEN

Mermaid

Your kit comes complete with everything you need to grow your own mini mermaid garden – just add water! Quick grow chia seeds sprout in as little as 3-5 days. Decorate, plant, water and grow!

Before you begin

- Cover your work area and have a cup of water and spoon nearby.
- The sand and potting mix can be messy. Avoid getting it near your face or eyes. In case of contact, rinse with water.
- Select which side of your terrarium base and lid will be the front. This will help you plan the arrangement of your stickers, seeds and accessories.

Plant

Before planting, decorate the outside of the terrarium base with the gems and pearls. Add a pearl to the shell.

- Open your potting mix and add a few tablespoons of water. Squish the bag until the mix clumps together like clay. Add more water as needed.
- Press the mix into the bottom of your terrarium.
- Sprinkle a few white stones across the back of your terrarium.
- Now sprinkle a few Chia seeds over and between the stones. Save the rest to plant later.
- Use the dropper to water the seeds.

Apply stickers to the inside-back and front of the lid

Decorate the base with gems and pearls

Decorate

- Decorate the inside/back and front of the terrarium top with the stickers.
- Add the decorative sand and stones to the top of the soil. Save the leftover sand and stones to replant your garden as needed.
- Add the mermaid tail and the shell to the front of your garden.
- When you are finished, pop on the lid and place your garden in a safe place.

Helpful Hints

- To keep your garden looking great, avoid unnecessary handling once it's decorated.
- The seeds need a little room to grow. Adding too many seeds at one time or not giving them enough water will inhibit plant growth.
- For best results do not put your terrarium in direct sunlight.
- If your garden is too wet, you may notice fuzzy mold growing on your plants. Remove the lid and let it air out. Wipe the inside of the terrarium lid with a dry paper towel. The fuzzy growth is nature's way of breaking down the plant material to create new soil and is not harmful. You can replant your garden using the leftover seeds and your own potting soil.
