

ANATOMY

QUESTION
The diagram shows the internal anatomy of the human eye. Which part of the eye is responsible for focusing light onto the retina?
A. Cornea
B. Iris
C. Lens
D. Retina

ANSWER
The correct answer is C. The lens is responsible for focusing light onto the retina. The cornea (A) is the outermost layer that refracts light. The iris (B) controls the size of the pupil. The retina (D) is the light-sensitive layer at the back of the eye that converts light into neural signals.
