

# ENCLOSURES

1. The first enclosure is a simple rectangular box with a lid. It is made of cardboard and is suitable for small insects. The lid is attached with a rubber band. The box is painted with a light blue color and has a small window on the side for observation.

2. The second enclosure is a more complex structure. It consists of a main rectangular box with a lid, and a smaller rectangular box attached to the side. This design allows for a larger volume of substrate and a more controlled environment. The lid is also attached with a rubber band. The entire structure is painted with a light green color.

3. The third enclosure is a cylindrical container made of plastic. It has a lid that fits snugly. The container is painted with a light purple color. It is suitable for insects that require a more humid environment. The lid is attached with a rubber band.
