

QUESTION 29

Which of the following is a characteristic of a line graph?

A. It is used to compare data across categories.

B. It is used to show the relationship between two variables.

C. It is used to show the change in data over time.

D. It is used to show the distribution of data.

E. It is used to show the frequency of data.

F. It is used to show the proportion of data.

G. It is used to show the trend of data.

H. It is used to show the correlation between two variables.

I. It is used to show the slope of a line.

J. It is used to show the area under a curve.

K. It is used to show the volume of data.

L. It is used to show the length of data.

M. It is used to show the width of data.

N. It is used to show the height of data.

O. It is used to show the depth of data.

P. It is used to show the weight of data.

Q. It is used to show the temperature of data.

R. It is used to show the pressure of data.

S. It is used to show the volume of data.

A. It is used to compare data across categories.

B. It is used to show the relationship between two variables.

C. It is used to show the change in data over time.

D. It is used to show the distribution of data.

E. It is used to show the frequency of data.

F. It is used to show the proportion of data.

G. It is used to show the trend of data.

H. It is used to show the correlation between two variables.

I. It is used to show the slope of a line.

J. It is used to show the area under a curve.

K. It is used to show the volume of data.

L. It is used to show the length of data.

M. It is used to show the width of data.

N. It is used to show the height of data.

O. It is used to show the depth of data.

P. It is used to show the weight of data.

Q. It is used to show the temperature of data.

R. It is used to show the pressure of data.

S. It is used to show the volume of data.

T. It is used to show the length of data.

U. It is used to show the width of data.
