

The diagram shows a plant cell with a thick cell wall and a large central vacuole. The nucleus is visible, and the cytoplasm is filled with various organelles, including chloroplasts. The cell membrane is located just inside the cell wall.

The cell wall is made of cellulose, which provides structural support. The large central vacuole is filled with water and helps maintain the cell's turgor pressure.

FALCETILE

The diagram shows a plant cell with a thick cell wall and a large central vacuole. The nucleus is visible, and the cytoplasm is filled with various organelles. The cell membrane is located just inside the cell wall.

The cell wall is made of cellulose, which provides structural support. The large central vacuole is filled with water and helps maintain the cell's turgor pressure.
