

NU2110 4' Firewood Holder

Addendum to Assembly Manual

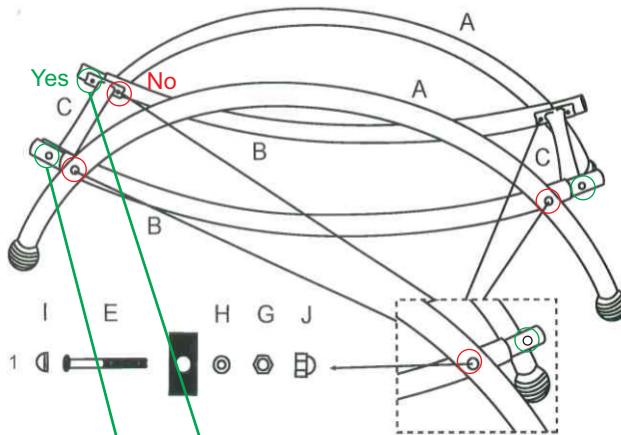

The drawing in the assembly manual was incorrect. The holes in the Base Sides (NUP4001) must assemble through the FIRST holes in the Bottom Frame (NUP4002) with the M8x100mm bolts (NUP4005) in all four places. Assembling as shown in the original manual drawing will result in the other holes being unable to align.

Please see the below corrected line art drawing and assembled picture.

Additionally, we do recommend TWO people assemble the Firewood Holder.

1.

Note:
Bolt should go through
OUTSIDE hole on both
sides of middle arc.

Correct:
(Both Sides)
