

# Stainless Steel Universal Fryer Connector Strip

## SFCS-Series

*The Universal Connector Strips are compatible with most 3/4/5 tube commercial fryers. Joining or banking fryers helps promote cleanliness and sanitation by preventing food particles from falling into the space between the fryers.*

## Instructions

Slide the connector strip down over the sidewalls of the two adjacent fryers with the tab towards the front.

**NOTE:** Some fryers have exposed screw heads on the sides. If screw heads are preventing a tight fit, remove screws and replace with flat head screws.

**NOTE:** If connector strip is too loose, squeeze the long sides of the connector strip to “taper in” and tighten the fit to the fryers sidewalls.
