

The diagram illustrates a mechanical system. The main components include a vertical shaft, a pulley, a belt, a horizontal arm, a vertical rod, and a rectangular component. The shaft is supported by a base. The pulley is mounted on the shaft, and the belt is used to transmit motion. The horizontal arm is attached to the shaft, and the vertical rod is connected to the end of this arm. The rectangular component is attached to the rod. The diagram is labeled with various parts and dimensions.

QUESTION

The diagram illustrates a mechanical system. The main components include a vertical shaft, a pulley, a belt, a horizontal arm, a vertical rod, and a rectangular component. The shaft is supported by a base. The pulley is mounted on the shaft, and the belt is used to transmit motion. The horizontal arm is attached to the shaft, and the vertical rod is connected to the end of this arm. The rectangular component is attached to the rod. The diagram is labeled with various parts and dimensions.

The diagram illustrates a mechanical system. The main components include a vertical shaft, a pulley, a belt, a horizontal arm, a vertical rod, and a rectangular component. The shaft is supported by a base. The pulley is mounted on the shaft, and the belt is used to transmit motion. The horizontal arm is attached to the shaft, and the vertical rod is connected to the end of this arm. The rectangular component is attached to the rod. The diagram is labeled with various parts and dimensions.
