

QUESTION

1. The stem of a plant is the main part that supports the leaves and roots.

2. The leaves are the flat parts of the plant that make food for the plant.

3. The roots are the parts of the plant that grow underground and absorb water and nutrients from the soil.

4. The stem is also responsible for transporting water and nutrients from the roots to the leaves.

5. The leaves are also responsible for releasing oxygen into the air.

6. The roots help to anchor the plant in the soil and prevent it from falling over.

7. The stem is also the part of the plant that grows new leaves and roots.

8. The leaves are also responsible for capturing energy from the sun to make food.

9. The roots help to store extra food for the plant to use later.

10. The stem is also the part of the plant that connects the leaves and roots to the soil.

ANSWER

# FACTFILE

Part	Function
Stem	Supports the plant and transports water and nutrients.
Leaves	Makes food for the plant and releases oxygen.
Roots	Absorbs water and nutrients from the soil and anchors the plant.

ANSWER
