

# CLOSED SUCTION CATHETERS ENDOTRACHEAL T-PIECE · LENGTH: 54.0 CM/21.3 IN

Dynarex Resp-O<sub>2</sub>™ Closed Suction Endotracheal Catheters are disposable respiratory devices designed to safely remove secretions from the respiratory tract of ventilator-dependent patients. The device allows ventilation to continue during suctioning, helps prevent cross-contamination, and protects caregivers from airborne pathogens.

- Protects patient from contact with outside pathogens and prevents contamination of the surrounding environment
- Smooth, flexible tubing minimizes patient discomfort
- Pressure wiper seal helps maintain PEEP
- Flex Tube provides adjustment and flexibility to the ventilator circuit
- Designed for 24-hr, single-patient use
- Does not contain DEHP
