

### THE BATTERY

1. The battery is a source of electrical energy.

2. It consists of several cells connected together.

3. Each cell contains a different chemical.

4. The chemicals react to produce electricity.

5. The battery is used to power many devices.

6. It is a common source of power for portable electronics.

7. The battery is a key component of many systems.

8. It provides a steady flow of current.

9. The battery is essential for many applications.

10. It is a reliable source of power.

11. The battery is used in a wide range of industries.

12. It is a vital part of many systems.

13. The battery is a key component of many systems.

14. It provides a steady flow of current.

15. The battery is essential for many applications.

16. It is a reliable source of power.

17. The battery is used in a wide range of industries.

18. It is a vital part of many systems.

19. The battery is a key component of many systems.

20. It provides a steady flow of current.

21. The battery is essential for many applications.

22. It is a reliable source of power.

23. The battery is used in a wide range of industries.

24. It is a vital part of many systems.

25. The battery is a key component of many systems.
