

1. Introduction
 This document provides a detailed overview of the project's objectives, scope, and methodology. The primary goal is to analyze the impact of the proposed changes on the existing system. The scope of the project is limited to the core functionality of the system, excluding peripheral components. The methodology involves a combination of qualitative and quantitative analysis, including user interviews, surveys, and data analysis.

Table 1: Project Milestones		
Milestone	Start Date	End Date
Project Kick-off	2023-01-15	2023-01-15
Requirement Gathering	2023-01-16	2023-02-15
System Design	2023-02-16	2023-03-15
Development	2023-03-16	2023-05-15
Testing	2023-05-16	2023-06-15
Deployment	2023-06-16	2023-06-16

2. Methodology

The methodology adopted for this project is a hybrid approach, combining both qualitative and quantitative research methods. The qualitative phase involves conducting in-depth interviews with key stakeholders to understand their needs and expectations. The quantitative phase involves distributing surveys to a larger group of users to gather statistical data on their preferences and usage patterns. The data collected from both phases will be analyzed to identify trends and inform the design decisions.

The project will follow a structured process to ensure the timely and effective delivery of the final product. The process begins with a thorough understanding of the requirements, followed by the design and development phases. Rigorous testing and validation will be conducted throughout the development process to ensure the quality and reliability of the system. The final phase involves the deployment and ongoing support of the system, with regular updates and maintenance to address any issues and incorporate user feedback.
