

New!

Introducing 3M™ Smooth Transition Tape.

You can virtually eliminate hard paint lines from door, fender and quarter panel jambs—anywhere you need a smooth paint or coating transition—with 3M™ Smooth Transition Tape. When used properly, 3M™ Smooth Transition Tape will help eliminate re-shooting, sanding, buffing or other time-consuming rework.

Adhesive-free edges allow coatings to feather naturally under the tape, leaving a smooth transition to the existing finish.

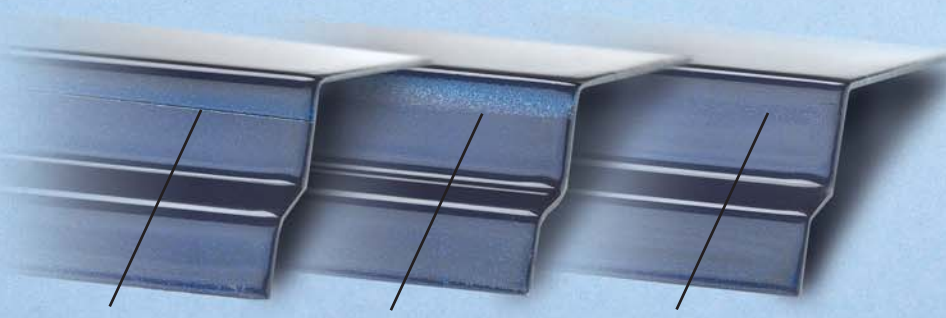

The unique, raised center ridge is the only part of the tape that contains adhesive.

For best results, use at least two strips to transition multiple coatings.

A custom-designed dispenser helps keep 3M™ Smooth Transition Tape clean and ready to dispense between uses.

Finally, a fast, simple way to

virtually eliminate rework caused by poor paint transitions.

Traditional tape/paper systems leave a distinct hard paint line when removed.

Folded tape systems still leave a clearly visible paint line.

With 3M™ Smooth Transition Tape it is nearly impossible to see the line between the existing and the new paint.

Anywhere you transition coatings.

3M™ Smooth Transition Tape was developed to use in all jambs or on outside body lines. The adhesive is confined to the center part of the tape only, which allows the paint to feather in, leaving a virtually invisible paint line.

For more information about 3M™ Smooth Transition Tape, call 1-877-MMM-CARS (1-877-666-2277) or visit www.3M.com/smoothtransition. For a demonstration, contact your 3M or local distributor representative.

Product #	Description	Case Quantity
051131-06800	1/4" x 30-foot roll	5 rolls plus 1 dispenser per box
