

1. The primary windings are connected in a star configuration.
 2. The secondary windings are connected in a star configuration.
 3. The secondary lines are connected to a load.
 4. The load is connected to a common ground point.
 5. The primary lines are connected to a common ground point.
 6. The secondary lines are connected to a common ground point.
 7. The load is connected to a common ground point.
 8. The primary lines are connected to a common ground point.
 9. The secondary lines are connected to a common ground point.
 10. The load is connected to a common ground point.

KINGSTON

1. The primary windings are connected in a star configuration.
 2. The secondary windings are connected in a star configuration.
 3. The secondary lines are connected to a load.
 4. The load is connected to a common ground point.
 5. The primary lines are connected to a common ground point.
 6. The secondary lines are connected to a common ground point.
 7. The load is connected to a common ground point.
 8. The primary lines are connected to a common ground point.
 9. The secondary lines are connected to a common ground point.
 10. The load is connected to a common ground point.
