

## ANATOMY HUB

Structure	Function
Cornea	Refracts light entering the eye.
Aqueous humor	Provides nutrients to the cornea and lens.
Iris	Controls the amount of light entering the eye.
Pupil	Opening through which light passes.
Lens	Refracts light to focus it on the retina.
Vitreous humor	Maintains the shape of the eye and provides nutrients.
Retina	Light-sensitive layer that converts light into neural signals.
Macula	Area of the retina responsible for central vision.
Blind spot	Point where the optic nerve exits the eye.
Optic nerve	Carries visual information from the retina to the brain.
Optic chiasm	Point where the optic nerves meet.
Optic tract	Carries visual information from the optic chiasm to the brain.
