

Percentage of U.S. population aged 65 and over

The percentage of the U.S. population aged 65 and over has increased steadily over the past two decades. This trend is driven by a combination of factors, including a decline in birth rates and an increase in life expectancy. The aging of the population has significant implications for social security, healthcare, and the labor force.

LONG-TERM TRENDS

Percentage of U.S. population aged 65 and over

The percentage of the U.S. population aged 65 and over has increased steadily over the past two decades. This trend is driven by a combination of factors, including a decline in birth rates and an increase in life expectancy. The aging of the population has significant implications for social security, healthcare, and the labor force.
