

The graph shows the relationship between the number of people and the number of people per person. The x-axis represents the number of people, and the y-axis represents the number of people per person. The curve starts at the origin (0,0) and increases, passing through points (1,1), (2,2), (3,3), and (4,4). The curve is concave down, indicating that the rate of increase is decreasing as the number of people increases.

## QUESTION

The graph shows the relationship between the number of people and the number of people per person. The x-axis represents the number of people, and the y-axis represents the number of people per person. The curve starts at the origin (0,0) and increases, passing through points (1,1), (2,2), (3,3), and (4,4). The curve is concave down, indicating that the rate of increase is decreasing as the number of people increases.

The graph shows the relationship between the number of people and the number of people per person. The x-axis represents the number of people, and the y-axis represents the number of people per person. The curve starts at the origin (0,0) and increases, passing through points (1,1), (2,2), (3,3), and (4,4). The curve is concave down, indicating that the rate of increase is decreasing as the number of people increases.

The graph shows the relationship between the number of people and the number of people per person.
