FEATURES & SPECIFICATIONS

INTENDED USE — BLT with Care222® technology combines the best-selling Lithonia Lighting® BLT Troffer and Care222 far-UVC disinfection* technology with a patented filter for narrow band 222nm emission. Care222 technology targets the air and surfaces for pathogen control¹. Care222 technology operates continually and meets exposure guidelines for occupied space established by the American Conference of Governmental Industrial Hygienists (ACGIH)². The BLT with Care222 technology features a popular center basket design that offers a clean, versatile style and volumetric light distribution. The troffer's high efficacy LED light engines deliver energy savings and low maintenance compared to traditional sources. An extensive selection of configurations and options make the BLT with Care222 technology the perfect choice for many lighting applications including healthcare facilities, offices, conference rooms, educational facilities, and other public spaces.

CONSTRUCTION — BLT with Care222 fixture components are **painted after fabrication**. BLT components are coated with a proprietary paint blend and die-formed for dimensional consistency.

End plates contain easy-to-position integral T-bar clips for securely attaching the luminaire to the T-grid. For additional T-grid security, optional screw on T-bar clips are available.

Diffusers are extruded from **impact modified acrylic** for increased durability.

LED Drivers are accessible from the plenum.

PCBAs and UV components are accessible from the room side. The **status indicator LED is visible from room.** UV module designed for easy replacement.

OPTICS — Volumetric illumination is achieved by creating an optimal mix of light to walls, partitions and vertical and horizontal work surfaces – rendering the interior space, objects and occupants in a more balanced, complimentary luminous environment. High performance extruded acrylic diffusers conceal LEDs and efficiently deliver light in a volumetric distribution.

ELECTRICAL — Long-life LEDs, coupled with high-efficiency drivers, provide superior quantity and quality of illumination for extended service life. 80% LED lumen maintenance at 60,000 hours (L80/60,000) based on IESNA LM-80-08 LED extrapolated life, calculated per IESNA TM-21-21. Color Variation within **3-step MacAdam ellipse (3SDCM)**.

eldoLED driver delivers dimming to 1%, and choices for control, while providing low-current inrush, 89% efficiency and low EMI.

CARE222 MODULE — Care222 mercury-free far-UVC excimer lamp emits a soft violet glow from 1.75" x 2.38 [44.5mm x 60.3mm] opening when powered.

The BLT with Care222 emits a wavelength range of 200nm ~ 230nm with Peak Wavelength at 222nm far-UVC. Patented **short pass filter for narrow band 222nm emission** that removes longer wavelengths that can penetrate the living tissue in skin or beyond the top layer of the cornea in the eyes. Enables operation that **meets ACGIH® guidelines for occupied space**².

Single circuit; not intended for use with wall switches. Connect to an unswitched circuit intended for 24/7/365 continuous operation.

Requires no external controls or startup commissioning

UV lamp module will operate on 12-minute cycles for a duration of between 10 and 50 seconds each cycle. The duration will depend on the specific dose chosen to meet the application design requirements.

UV Lamp rated for 3000 hours (approximately 5 years of life based on activated hours)³.

LIGHTING CONTROLS — Optional integrated nLight® controls make the visible light portion of each luminaire addressable – allowing them to digitally communicate with other nLight enabled controls such as dimmers, switches, occupancy sensors and photocontrols. Connection to nLight is simple. It can be accomplished with integrated nLight AIR wireless rIO and rES7 sensors, or through standard Cat-5 cabling. nLight offers unique plug-and-play convenience as devices and luminaires automatically discover each other and self-commission. nLight AIR is commissioned easily through an intuitive mobile app.

Integrated Sensor (nLight Wired Networking): The integrated sensor is nLight-enabled, meaning it has the ability to communicate over an nLight network. When wired, using CAT-5 cabling, with other nLight-enabled sensors, power packs, or wallPods, an nLight control zone is created. Once linked to a Gateway, directly or via a Bridge, the zone becomes capable of remote status monitoring and control via SensorView™ software. See page 5 for the nLight sensor options.

Integrated Smart Sensor (nLight AIR Wireless Platform): The RES7 sensor is nLight AIR enabled, meaning it has the ability to communicate over the wireless nLight control platform. It is available with an automatic dimming photocell, and either a digital PIR or a microphonics (PDT) dual technology occupancy sensor. It pairs to other luminaires and wall switches through our mobile app, CLAIRITY+, which allows for simple sensor adjustment. See page 5 for more details on the Integrated Smart Sensor.

INSTALLATION — The 4" low profile of the BLT provides increased installation flexibility. The BLT fits into standard 15/16" and narrow 9/16" T-grid ceiling systems. Available in single and dual module configuration for ceiling heights from 9' to 12.5'. For recessed mounting in hard ceiling applications, Drywall Grid Adapters (DGA) are available as an accessory. See Accessories section.

LISTINGS — **UL certified to meet US standards for LED luminaires and germicidal equipment for use in occupied spaces. IC rated.** Suitable for ambient temperatures from 32°F (0°C) to 77°F (25°C). Tested in accordance with ISO 14644-1; suitable for ISO Class 5-9 positive and negative pressure clean rooms.

Damp location listed.

EPA Establishment Number: 97727-MEX-2.

DesignLights Consortium® (DLC) Premium qualified product and DLC qualified product. Not all versions of this product may be DLC Premium qualified or DLC qualified. Please check the DLC Qualified Products List at www.designlights.org/QPL to confirm which versions are qualified.

PRECAUTIONARY STATEMENTS —

- Emitters used in this fixture are in the EXEMPT RISK GROUP for photobiological risk, as described in IEC 62471, when correctly commissioned and properly installed in accordance with written instructions. See [Installation Instructions](#) for proper usage guidelines and warnings regarding risks resulting from misuse.
- See below for information about potential limited photodegradation of materials.
- This fixture may generate ozone. Each emitter in the fixture has an ozone emission maximum concentration of 0.001 ppm over an 8-hour period, as tested in accordance with UL 867. Precautions that can be taken, if needed, to ensure that ozone concentration stays within applicable permissible exposure limits are described in the [Installation Instructions](#).

WARRANTY — 5-year limited fixture warranty excluding incorporated consumable UV-based devices which carry a 2-year limited warranty. This is the only warranty provided and no other statements in this specification sheet create any warranty of any kind. All other express and implied warranties are disclaimed. Complete warranty terms located at www.acuitybrands.com/support/warranty/terms-and-conditions

NOTE: Actual performance may differ as a result of end-user environment and application. All values are design or typical values, measured under laboratory conditions. LED values measured at 25 °C. Specifications subject to change without notice.

SALES LIMITATIONS — **For sale only in the United States of America and Mexico.** Dual module configurations do not meet California air cleaner regulation requirements; dual module configurations cannot be shipped to California.

A+ Capable Luminaire

This item is an A+ capable luminaire, which has been designed and tested to provide consistent color appearance and out-of-the-box control compatibility with simple commissioning.

- All configurations of this luminaire meet the Acuity Brands' specification for chromatic consistency
- This luminaire is part of an A+ Certified solution for nLight® control networks when ordered with drivers marked by a **shaded background***
- This luminaire is part of an A+ Certified solution for nLight control networks, providing advanced control functionality at the luminaire level, when selection includes driver and control options marked by a **shaded background***

To learn more about A+, visit www.acuitybrands.com/aplus

*See ordering tree for details

Care222® delivers a narrow band of 222nm UV, at energy levels that do not penetrate living tissue in skin or beyond the top layer of the cornea in the eyes.

Disclaimer

*All references to "disinfection" are referring generally to bioburden reduction and are not intended to refer to any specific definition of the term as may be used for other purposes by the U.S. Food and Drug Administration or the U.S. Environmental Protection Agency. Bioburden reduction is a function of fixture run time and the distance to the UV light source, airflow, room size, shadow areas and/or other factors, and the level of reduction will vary within a specific space. These fixtures are not intended for use in the cure, mitigation or prevention of disease and are not certified or approved for use as or for the disinfection of medical devices by the FDA. It is the obligation of the end-user to consult with appropriately qualified Professional Engineer(s), a Certified Infection Control professional and a Certified Industrial Hygienist, as applicable, to determine whether these fixtures meet the applicable requirements for system performance, code compliance, safety (including safety and hazard alerting signs), suitability and effectiveness for use in a particular application design.

UL924 Sequence of Operation

The below information applies to all nLight AIR devices with an EM option.

- EM devices will remain at their high-end trim and ignore wireless lighting control commands, unless a normal-power-sensed (NPS) broadcast is received at least every 8 seconds.
- Using the CLAIRITY+ mobile app, EM devices must be associated with a group that includes a normal power sensing device to receive NPS broadcasts.
- Only non-emergency rPP20, rLSXR, rSBOR, rSDGR, and nLight AIR luminaires with version 3.4 or later firmware can provide normal power sensing for EM devices. See specification sheets for control devices and luminaires for more information on options that support normal power sensing.

nLight Platform (Visible Light Control)

nLight embedded fixtures offer:	Customers get:
Manual Dimming	Convenience and visual comfort for occupants
Motion Sensing and/or Daylight Harvesting	Energy savings and code compliance
Fixture or Group Level Control	Ability to configure lighting to the space requirements
Flexibility	Ease of fixture moves, adds and changes
Wireless Wall Switch (nLight AIR Only)	Ease and flexibility of placement
Astronomical and Time of Day Scheduling	Energy savings and building security
Scalable Solution	nLight controls to grow with your business
Future-Ready	nLight platform to set foundation for future upgrades and capabilities

nLight Air Wireless

Simple as 1,2,3

1. Install the nLight® AIR fixtures with embedded smart sensor.
2. Install the wireless battery-powered wall switch.
3. With CLAIRITY+ app, pair the fixtures with the wall switch and if desired, customize the sensor settings for the desired outcome.

nLight Wired Networking

Simple as 1,2,3

1. Install the nLight® Wired fixtures with embedded control.
2. Install the nLight Wired wall switch.
3. Connect the fixtures using standard CAT5e cables and the devices will automatically discover each other and work (plug and play).

Sensor Coverage Pattern Mini 360° Lens

- Recommended for walking motion detection from mounting heights between 8 ft (2.44 m) and 20 ft (6.10 m).
- Initial detection of walking motion along sensor axes at distances of 2x the mounting height up to 15 ft (4.57 m) and 1.75x up to 20 ft (6.10 m).
- Provides 12 ft (3.66 m) radial detection of small motion when mounted at 9 ft (2.74 m).
- Initial detection will occur earlier when walking across sensor's field of view than when walking directly at sensor.

9 FT Mounting

nLight AIR Wireless

nLight AIR is the ideal solution for retrofit or new construction spaces where adding additional wiring can be labor intensive and nLight AIR is available with or without an integral sensor. The integrated rES7 or rES7PDT smart sensors are part of each luminaire in the nLight AIR network, which can be grouped to control multiple luminaires. The granularity of control with the digital PIR occupancy detection and daylight sensing makes a great solution for any application.

nLight Wired Networking

The nES 7 is ideal for small rooms without obstructions or areas with primarily walking motion. Ideal areas include hallways, corridors, storage rooms, and breakrooms. Additionally, the nES7ADCX includes an integrated photocell, which enables daylight harvesting controls.

For areas like restrooms, private offices, open offices, conference rooms or any space with obstructions, the nES PDT 7 dual technology sensor is recommended. The nES PDT 7 utilizes both PIR (passive infrared) and Microphonics technologies to detect occupancy. Additionally, the nESPDT7ADCX includes an integrated photocell, which enables daylight harvesting controls which is ideal for areas where windows are present.

Sequence of Operation (nES7 and rES7 and Sensor)

*The presetting on the automatic dimming photocell is 5fc (NES7) and 10fc (RES7).

Care222 UV Module Wattage Consumption

Single UV Module (1UV222) and Dual UV Modules (2UV222) consume approximately 16.5 watts. Highest power programming uses .0537 kWh per 24hr period, usage varies based on programming selected.

How to Estimate Delivered Lumens in Emergency Mode

Use the formula below to estimate the delivered lumens in emergency mode

$$\text{Delivered Lumens} = 1.25 \times P \times \text{LPW}$$

P = Output power of emergency driver. P = 10W for E10WLCP option.

LPW = Lumen per watt rating of the luminaire. This information is available on the Acuity Brands Lighting luminaire spec sheet. LPW = Lumen per watt rating of the luminaire. LPW information available in Performance Data section.

2BLT Volumetric Recessed Lighting 2' x 2' and 2' x 4' with Care222 Technology

2x2 and 2x4 BLT with C222 Single Module

Projected UV Exposure and Exposure Limits

This chart illustrates mounting height configurations for the BLT fixture, incorporating Care222® technology, that provide a UV exposure dose within the exposure guidelines¹ established and published by the American Conference of Governmental Industrial Hygienists (ACGIH®). For the UV exposure dose to remain within the ACGIH guidelines for the level of UV exposure a typical worker can be exposed to without adverse health effects, the maximum exposure dose must not exceed 23 mJ/cm² (millijoules per square centimeter) for an 8-hour period of time. Per the UL 8802 standard, the upper limit of occupied space is defined to be a test plane 7' Above Finished Floor (AFF). This calculated maximum exposure dose represents the dose an individual would receive over an 8-hour period at 7' Above Finished Floor (AFF) even if stationary in the location of maximum dose.

ACGIH guidelines are designed for use by industrial hygienists in making decisions regarding safe levels of exposure to hazards in the workplace. The levels of exposure in the ACGIH guidelines are quantified as Threshold Limit Values (TLVs®) and are expressed as Time-Weighted Averages (TWAs). The TLVs refer to incoherent ultraviolet (UV) radiation with wavelengths between 180 and 400nm and represent conditions under which it is believed that nearly all healthy workers may be repeatedly exposed without acute adverse health effects such as erythema and photokeratitis.

Distance		Maximum 8 hr Dose	Meets ACGIH ¹
Mounting Ht.	Mounting Ht. to Head Ht.	mJ/cm ²	<23 mJ/cm ²
9'	2'	18.99	Yes
9'-6"	2'-6"	20.26	Yes
10'	3'	19.7	Yes
10'-6"	3'-6"	20.26	Yes
11'	4'	19.31	Yes
11'-6"	4'-6"	15.26	Yes
12'	5'	12.36	Yes

Notes

- ACGIH® 2021 TLVs® and BEIs® - Based on the Documentation of the Threshold Limit Values for Chemical Substances and Physical Agents & Biological Exposure Indices; when installed and used in accordance with written instructions.

2x2 and 2x4 BLT with C222 Single Module

Projected Virus Inactivation

Use this chart to estimate the effectiveness of one single module fixture mounted at varying mounting heights (Z) and having different areas of coverage (X x Y), at inactivating the pathogens listed below on surfaces. The calculated average dose for each scenario is determined from Visual® Lighting application software radiometric modeling¹ and is then correlated with laboratory research² to derive projected inactivation effectiveness for specific pathogens. The analysis assumes that a horizontal plane positioned 2'-6" Above Finished Floor (AFF) is receiving the dose. For different areas of coverage or multiple fixture layouts, consult an Acuity Brands UV Lighting Specialist.

Notes

1. The results presented here are based upon a 12'x12'x15' high empty room with all surface reflectance assumed to be 5%.
2. Reference [Pathogen Inactivation Dose Reference List - 222nm, 254nm & Pulsed Xenon UV Light Sources](#).
3. As a result of computational limitations and simplifying modeling assumptions in Visual, variations in actual product performance from tested product samples, and/or variations in field conditions from laboratory testing conditions, the accuracy of calculated output values identifying radiometric quantities and any resulting derived radiation dose predictions may be adversely affected. See complete disclaimer at: [Visual Disclaimer](#)
4. This data is reported in reference to Projected Photodegradation Effect. See pages 24 and 25 for Photodegradation Testing Results.

2BLT Volumetric Recessed Lighting 2' x 2' and 2' x 4' with Care222 Technology

2x2 BLT with C222 Dual Module

Projected UV Exposure and Exposure Limits

This chart illustrates mounting height configurations for the BLT fixture, incorporating Care222® technology, that provide a UV exposure dose within the exposure guidelines¹ established and published by the American Conference of Governmental Industrial Hygienists (ACGIH®). For the UV exposure dose to remain within the ACGIH guidelines for the level of UV exposure a typical worker can be exposed to without adverse health effects, the maximum exposure dose must not exceed 23 mJ/cm² (millijoules per square centimeter) for an 8-hour period of time. Per the UL 8802 standard, the upper limit of occupied space is defined to be a test plane 7' Above Finished Floor (AFF). This calculated maximum exposure dose represents the dose an individual would receive over an 8-hour period at 7' Above Finished Floor (AFF) even if stationary in the location of maximum dose.

ACGIH guidelines are designed for use by industrial hygienists in making decisions regarding safe levels of exposure to hazards in the workplace. The levels of exposure in the ACGIH guidelines are quantified as Threshold Limit Values (TLVs®) and are expressed as Time-Weighted Averages (TWAs). The TLVs refer to incoherent ultraviolet (UV) radiation with wavelengths between 180 and 400nm and represent conditions under which it is believed that nearly all healthy workers may be repeatedly exposed without acute adverse health effects such as erythema and photokeratitis.

Distance		Maximum 8 hr Dose	Meets ACGIH® TLV-TWA
Mounting Ht.	Mounting Ht. to Head Ht.	mJ/cm ²	<23 mJ/cm ²
9'-6"	2'-6"	20.02	Yes
10'	3'	19.8	Yes
10'-6"	3'-6"	18.81	Yes
11'	4'	19.44	Yes
11'-6"	4'-6"	19.86	Yes
12'	5'	18.96	Yes
12'-6"	5'-6"	19.66	Yes

Notes

¹ ACGIH® 2021 TLVs® and BEIs® - Based on the Documentation of the Threshold Limit Values for Chemical Substances and Physical Agents & Biological Exposure Indices; when installed and used in accordance with written instructions.

2BLT Volumetric Recessed Lighting 2' x 2' and 2' x 4' with Care222 Technology

2x2 BLT with C222 Dual Module

Projected Virus Inactivation

Use this chart to estimate the effectiveness of one dual module fixture mounted at varying mounting heights (Z) and having different areas of coverage (X x Y), at inactivating the pathogens listed below on surfaces. The calculated average dose for each scenario is determined from Visual® Lighting application software radiometric modeling¹ and is then correlated with laboratory research² to derive projected inactivation effectiveness for specific pathogens. The analysis assumes that a horizontal plane positioned 2'-6" Above Finished Floor (AFF) is receiving the dose. For different areas of coverage or multiple fixture layouts, consult an Acuity Brands UV Lighting Specialist.

Notes

1. The results presented here are based upon a 12x12x15' high empty room with all surface reflectance assumed to be 5%.

2BLT Volumetric Recessed Lighting 2' x 2' and 2' x 4' with Care222 Technology

2x4 BLT with C222 Dual Module

Projected UV Exposure and Exposure Limits

This chart illustrates mounting height configurations for the BLT fixture, incorporating Care222® technology, that provide a UV exposure dose within the exposure guidelines¹ established and published by the American Conference of Governmental Industrial Hygienists (ACGIH®). For the UV exposure dose to remain within the ACGIH guidelines for the level of UV exposure a typical worker can be exposed to without adverse health effects, the maximum exposure dose must not exceed 23 mJ/cm² (millijoules per square centimeter) for an 8-hour period of time. Per the UL 8802 standard, the upper limit of occupied space is defined to be a test plane 7' Above Finished Floor (AFF). This calculated maximum exposure dose represents the dose an individual would receive over an 8-hour period at 7' Above Finished Floor (AFF) even if stationary in the location of maximum dose.

ACGIH guidelines are designed for use by industrial hygienists in making decisions regarding safe levels of exposure to hazards in the workplace. The levels of exposure in the ACGIH guidelines are quantified as Threshold Limit Values (TLVs®) and are expressed as Time-Weighted Averages (TWAs). The TLVs refer to incoherent ultraviolet (UV) radiation with wavelengths between 180 and 400nm and represent conditions under which it is believed that nearly all healthy workers may be repeatedly exposed without acute adverse health effects such as erythema and photokeratitis.

Distance		Maximum 8 hr Dose	Meets ACGIH® TLV-TWA
Mounting Ht.	Mounting Ht. to Head Ht.	mJ/cm ²	<23 mJ/cm ²
9'	2'	18.99	Yes
9'-6"	2'-6"	20.26	Yes
10'	3'	19.69	Yes
10'-6"	3'-6"	19.39	Yes
11'	4'	19.62	Yes
11'-6"	4'-6"	19.51	Yes
12'	5'	19	Yes

Notes

- 1 ACGIH® 2021 TLVs® and BEIs® - Based on the Documentation of the Threshold Limit Values for Chemical Substances and Physical Agents & Biological Exposure Indices; when installed and used in accordance with written instructions.

2BLT Volumetric Recessed Lighting 2' x 2' and 2' x 4' with Care222 Technology

2x4 BLT with C222 Dual Module

Projected Virus Inactivation

Use this chart to estimate the effectiveness of one dual module fixture mounted at varying mounting heights (Z) and having different areas of coverage (X x Y), at inactivating the pathogens listed below on surfaces. The calculated average dose for each scenario is determined from Visual® Lighting application software radiometric modeling¹ and is then correlated with laboratory research² to derive projected inactivation effectiveness for specific pathogens. The analysis assumes that a horizontal plane positioned 2'-6" Above Finished Floor (AFF) is receiving the dose. For different areas of coverage or multiple fixture layouts, consult an Acuity Brands UV Lighting Specialist.

Notes

- Notes**
- The results presented here are based upon a 12'x12'x15' high empty room with all surface reflectance assumed to be 5%.
 - Intentionally omitted.
 - As a result of computational limitations and simplifying modeling assumptions in Visual, variations in actual product performance from tested product samples, and/or variations in field conditions from laboratory testing conditions, the accuracy of calculated output values identifying radiometric quantities and any resulting derived radiation dose predictions may be adversely affected. See complete disclaimer at: [Visual Disclaimer](#)
 - This data is reported in reference to Projected Photodegradation Effect. See pages 24 and 25 for Photodegradation Testing Results.

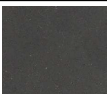

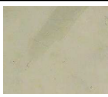

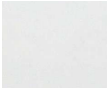

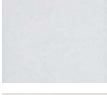

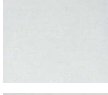

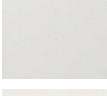

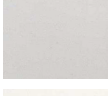

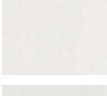

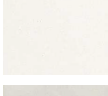

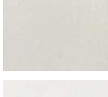

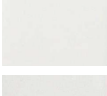

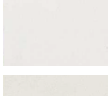

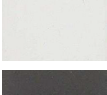

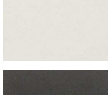

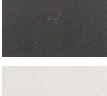

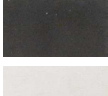

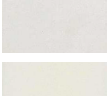

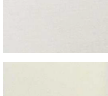

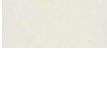

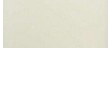

Projected Photodegradation Effect

Refer to the "Years to 54,000 mJ/cm²" data reported on Projected Virus Inactivation and Projected Bacteria Inactivation Tables above and the Photodegradation Testing Results below to estimate the photodegradation effect on surfaces resulting from UV irradiation from one BLT fixture (single module or dual module, as applicable) with the coverage areas (XxY)¹ and at the mounting heights specified in the tables above. The calculated average dose² for each scenario identified in the Projected Virus Inactivation and Projected Bacteria Inactivation Tables is determined from Visual[®] Lighting application software radiometric modeling and is used to calculate the amount of time required to reach the dose used in independent laboratory photodegradation testing³. The analysis assumes that a horizontal plane positioned 2'-6" Above Finished Floor (AFF) is receiving the dose. Note that the calculated doses as presented in the Projected Virus Inactivation and Projected Bacteria Inactivation Tables are average values on the designated calculation plane. Calculated doses at specific points may be higher or lower than the average value. To estimate the photodegradation effect for different areas of coverage, at specific points, or multiple fixture layouts, consult an Acuity Brands UV Lighting Specialist.

Notes

1. The results presented here are based upon a 12'x12'x15' high empty room with all surface reflectance assumed to be 5%.
2. As a result of computational limitations and simplifying modeling assumptions in Visual, variations in actual product performance from tested product samples, and/or variations in field conditions from laboratory testing conditions, the accuracy of calculated output values identifying radiometric quantities and any resulting derived radiation dose predictions may be adversely affected. Independent Lab Test Results³ for Determining Photodegradation Effect for Far-UVC Filtered 222nm technology (Care222[®])

* The independent test lab results compared materials at an initial state of no UV exposure and a final state of UV exposure at 54,000 mJ/cm².

** ΔE is a benchmark used to measure color difference compared to a known set of CIELAB color coordinates defined by the International Commission on Illumination (CIE). The Photodegradation Testing Results table presents data calculated by the CIE76 formula, ΔE^{*ab} . CIE76 is a formula that relates a measured color difference to a known set of CIELAB coordinates. $\Delta E^{*ab} \sim 2.3$ equates to a Just Noticeable Difference

***Durometer Hardness is a benchmark of the material hardness, as measured by a Shore Durometer device. The Photodegradation Testing Results table presents the difference in measured material hardness over the exposure dose. For the majority of the materials tested there was no or only a very small change in Durometer Hardness. Unvarnished Oak and Poplar showed some change in Durometer Hardness.

Comparing Far-UVC Filtered 222nm Disinfection Technology (Care222[®]) Photodegradation Effect to General Illumination Photodegradation Effect

To compare photodegradation caused by UV to photodegradation caused by general illumination, which also causes a photodegradation effect, a Just Noticeable Difference ($\Delta E^{*ab} \sim 2.3$) in a space illuminated by a white light source to an illuminance of 50 fc would occur as soon as 6 months for highly sensitive materials and as long as 30 years for minimally sensitive materials.* There is recognizable photodegradation of materials caused by almost all light sources including incandescent, fluorescent, halogen, metal halide, LED, and UV. While some UV sources, depending on spectral content and intensity, can cause substantial photodegradation, the information presented in the Photodegradation Testing Results table illustrates specifically the generally minimal photodegradation effect of far-UVC filtered 222nm technology (Care222[®]) when utilizing these products in typical application.

* ANSI/IES RP-30-20 Recommended Practice: Lighting Museums, Table C-2
