Wiring diagram showing electrical components and their connections. The diagram includes a battery, fuse block, relay, and fuse on the left, and a larger component (likely the alternator or a control unit) on the right. The connections are as follows:

- A cable runs from the bottom of the fuse block to the bottom of the larger component.
- Another cable runs from the terminal on the larger component to a separate terminal on the right.
- A third cable runs from the top of the fuse block to the top of the larger component.
