

The diagram illustrates the relationship between a 3D point and its 2D projections. The 3D point is defined by its coordinates (x, y, z) . The projection onto the xy -plane is a 2D point (x, y) , and the projection onto the yz -plane is a 2D point (y, z) . The axes are labeled x , y , and z .

QUESTION

The diagram illustrates the relationship between a 3D point and its 2D projections. The 3D point is defined by its coordinates (x, y, z) . The projection onto the xy -plane is a 2D point (x, y) , and the projection onto the yz -plane is a 2D point (y, z) . The axes are labeled x , y , and z .
