## Dimmer Compatibility List

### Important Notice

Because dimming equipment, applications, and conditions of use are many, varied, and beyond Current's control, this information necessarily is based on limited samples sizes and testing. This list only included dimmers that have been tested with the Current's luminaires listed. There may be other dimmers on the market that are compatible with these Current's luminaires. If you have a question about a particular dimmer that is not on the list, please contact Current to see if the model has been tested, or to arrange testing.

### Triac/ELV Dimming

1. Adjust the dimmer to the lowest setting.
2. Locate the trim adjustment and set the lowest light level where the light output is stable.
3. Turn fixture off and on to ensure proper operation. If it is not operating as expected, adjust the trim up slightly and retest.

### 0-10V Dimming

1. Turn the fixture on.
2. Adjust the dimmer to the lowest setting.
3. Adjust trim down until all fixtures appear to be off.
