Care and use

To ensure the optimal performance of your bath mat, begin by removing all packaging and laying the mat flat for 24 hours prior to use. Soak the bath mat in warm water for 10 minutes before its first use and then place it into a clean bathtub, ensuring that it is free of any dirt or oils. It is important not to use the bath mat on textured surfaces, as the suction pads may not adhere properly. Position the bath mat centrally in the bathtub with the suction pads facing down before filling the tub with water. Once filled, firmly press down on the entire surface of the bath mat while kneeling beside the bathtub on a clean area to secure it in place. Carefully step onto the mat while grasping a grab rail or the edge of the tub, and tread down on eight to ten different areas of the bath mat to ensure proper adhesion. Should the suction pads not anchor securely, repeat the previous steps. After use, lift one corner of the bath mat to peel it back, rinse it thoroughly, and hang it to dry—do not use a hairdryer or place it over a radiator. This product complies with BS 8445:2012. Please note that the bath mat is not recommended for textured surfaces, and bleach should be avoided. Always maintain a clean bathtub surface and remove the mat prior to cleaning to ensure safety. Bath oils may diminish the effectiveness of the mat, so use caution when entering and exiting the bathtub. The mat is designed to help prevent slipping; however, its effectiveness is contingent upon proper care and usage.

Made in **China**.
