

BRAVE HEART

ZERO-Tech Speaker Cable

Bigger

On the outside, Brave Heart is nearly the size of the Mythical speaker cables, just 0.6 mm smaller OD. However, Brave Heart is more physically manageable than William Tell because positive and negative are separate round constructions (see photo below).

On the inside, Brave Heart has almost a third more of the same superb PSC+ copper as used in William Tell, making Brave Heart a slightly junior ThunderBird.

Bigger means more “torque.” Damping-factor is better preserved over length, especially benefitting speakers with very low impedance at some (often bass) frequencies.

Bigger means flatter frequency response. More metal means that variation in speaker impedance values across the frequency spectrum has less effect on frequency response.

Speaker Side

The necessary electrical connection that enables ZERO-Tech: Concealed by what appears to be a traditional breakout, the positive drain wire connects to the negative — at the speaker end *only*.

Amp Side

Despite Brave Heart's appropriately large size, connections to the amp side are made significantly simpler thanks to increased physical flexibility.

Quieter

Bigger physically overall also enables the audio quality that most impresses and separates Brave Heart from William Tell.

- Internally, conductors are farther apart thanks to more insulation, reducing the out-of-focus effect of conductor-to-conductor magnetic interaction.
- Upgraded polypropylene insulation reduces dielectric-noise.
- Much thicker multiple layers of Carbon-Loaded PVC, newly added Graphene, and 12 times as much silver on the drain wires further improves RF-Noise Dissipation.

ZERO-Tech

Old news but still as special as ever and still exclusive to AudioQuest Folk Heroes and Mythical Creatures. ZERO-Tech eliminates characteristic impedance mismatches between a cable and the attached source and load. Power seems to flow unencumbered, presenting music and soundtracks as if out of nowhere.

Classic AQ Good Stuff

- Brave Heart includes our 72v Dielectric-Bias System.
- The Perfect-Surface Copper+ (PSC+) conductors are solid.
- The conductors are direction-controlled, minimizing RF Noise getting into active circuits.
- No RF-relaying metal in cable dressing, breakouts, or plug barrels.
- Cold-welded gas-tight connections to Red Copper spades or bananas.

Synergy

While a grossly overused and misused term, there is real synergy when all the above materials, values, and techniques employed in Brave Heart work in concert.

Brave Heart is Bigger, Badder, Better than AudioQuest has ever offered at this price.

BRAVE HEART | ZERO-Tech Speaker Cable

US Retail: **\$4,990**/8ft pair; **\$5,790**/10ft pair; or made to order in any length with choice of Bananas or Spades ("U," "V," or "Multi") on either end.
