TPC

Unlimited Joules

Never Needs Replacement

Non-Sacrificial Surge Protection

With its unlimited joule rating, PQ dissipates all surges that can damage electronics over time.

TPC

Transient Power Correction

Delivers 45 amps peak power on demand, producing thrilling dynamic contrasts, bass extension, and control.

Filtration

Linear AC & RF Filtration

Increasing levels of linear filtration to reduce the harmful effects of AC line noise and RF interference by expanding filter bandwidth.

AudioQuest Assurance

Warranty Protection

PowerQuest devices are backed by a 5-year limited warranty and world-class support.

Catastrophic Protection

Extreme Voltage Shutdown (EVS)

Shuts down the unit in any over-voltage condition and automatically resets when safe.

Power Cable

RF-Noise Protection

The included power cable is specifically designed to reduce distortion and minimize noise.

202506USEN_v3

Enhance your audio and video experience with PowerQuest. AudioQuest power filtration removes more noise and distortion than most power conditioners, unlocking your system’s full potential.

Unlike traditional surge protectors, PowerQuest features Non-Sacrificial Surge Protection, safeguarding your gear from high voltage and current without degrading over time.

**PQ-303, PQ-505, PQ-707, & PQ-909:
2RU Rack Ears Included**

Space-saving rack mountable design ensures efficient organization while optimizing power delivery.

**PQ-2 and PQ-3:
Integrated USB Ports**

The PQ-2 and PQ-3 include high-speed USB-A ports for convenient device charging.

Linear AC & RF Filtration

PowerQuest’s filtration technology significantly reduces electrical noise in a linear (consistent) manner, delivering clean, uncompressed power for a more immersive audio/video experience.

High-Performance Power Cables

Comprising pure metals, direction-controlled conductors, cold-welded terminations, and a flat-to-wall plug, AudioQuest power cables reduce distortion and efficiently minimize noise.

**HIGH-CURRENT
FOR AMPLIFICATION DEVICES**

**LINEAR-FILTERED
FOR SOURCE COMPONENTS**

High-Current Outlets: Optimized for variable-current amplification components—power amps, powered speakers, A/V receivers, subwoofers—ensuring dynamic, uncompromised performance.

Linear-Filtered Source Outlets: Designed for constant-current source components—TVs, media streamers, disc players, turntables, preamplifiers, cable boxes, and more—delivering cleaner power for optimal performance and reduced noise.
