Pressure Independent Control Series

Two-Way Cast Iron Flanged Bodies, ANSI 125 and 250

Description

Siemens Pressure Independent Control Valves integrate three functions into a single device: control valve, adjustable flow limiter, and automatic differential pressure regulator. They are available in both ANSI Class 125 and 250.

Features

- Control valve with integrated differential pressure regulator and adjustable flow limiter
- ANSI 125 and ANSI 250 bodies and flanges
- 2-1/2-, 3-, 4-, 5-, 6-, and 8-inch (65, 80, 100, 125, 150, and 200 mm)
- Field adjustable presetting
- < ANSI Class IV leakage (0.01%)
- Pressure test (P/T) points
- Can be equipped with SAX, SAV, or SQV electromotoric actuators

Product Numbers

Table 1.

Product Number	ANSI Pressure Class	Line Size Inch (mm)	Maximum Flow Range GPM (m^3/h)	Δp Regulator Operating Range psi (kPa)
599-07330	125	2.5 (65)	21 to 132 (4.8 to 30)	* to 116 (* to 800)
599-07335	250			
599-07331	125	3 (80)	31 to 195 (7 to 44)	* to 116 (* to 800)
599-07336	250			
599-07332	125	4 (100)	64 to 370 (14.4 to 84)	* to 116 (* to 800)
599-07337	250			
599-07333	125	5 (125)	78 to 525 (18 to 119)	* to 116 (* to 800)
599-07338	250			
599-07334	125	6 (150)	106 to 740 (24 to 168)	* to 116 (* to 800)
599-07339	250			
599-07340	125	8 (200)	418 to 925 (95 to 210)	* to 116 (* to 800)
599-07345			572 to 1233 (130 to 280)	

* **Note:** See Table for minimum Δp at each given presetting.

Application

- For use in heating, ventilating and air conditioning systems as a control valve
- For closed loop hot or chilled water applications

Caution Notations

CAUTION:		Equipment damage may occur if you do not perform a procedure as specified.

Specifications

Functional Data	Line size	2-1/2-inch (65 mm) to 8-inch (200 mm)	
	Body style	Flanged	
	Pressure class	ANSI 125 and ANSI 250	
	Pressure regulation flow accuracy	± 5% for 2-1/2- to 6-inch	
		± 10% for 8-inch	
	Valve characteristic	Linear	
	Close-off	116 psi (800 kPa)	
	Leakage rate	< ANSI Class IV (0 to 0.01% of nominal maximum flow)	
	Operating direction	Normally open (push to close)	
	Permissible media	Hot water, chilled water, water/glycol solution	
	Medium temperature range	34°F to 250°F (1°C to 121°C)	
	Nominal stroke	2.5- and 3-inch	3/4-inch (20 mm)
		4- and 5-inch	1-1/2-inch (40 mm)
		6- and 8-inch	1-11/16-inch (43 mm)
Materials	Valve body	Cast iron	
	Stem, spring, seat	Stainless steel	
	Plug	Brass (DZR)	
	Regulator	Stainless steel	
	Seals	EPDM (peroxide cured)	
General ambient conditions	Temperature		
	Operation	5°F to 131°F (-15°C to 55°C)	
	Transport	-22°F to 149°F (-30°C to 65°C)	
	Storage	5°F to 122°F (-15°C to 50°C)	
	Humidity		
	Operation	5 to 95% rh	
	Transport	<95% rh	
	Storage	5 to 95% rh

Pressure Test Points

The 599-0733X Series PICV are equipped with three pressure test points (P1, P2, P3) for measuring and monitoring the differential pressure across the control valve and across the PICV during commissioning or for analysis during operation. See Figure 3.

Operation

The Pressure Independent Control Valves combine three functions (see Figure 3):

- a control valve (5) for controlling the volumetric flow,
- a field-adjustable flow limiter (4) with a dial (1) for a pre-settable maximum volumetric flow,
- a differential pressure regulator (3) that automatically adjusts to pressure fluctuations in the hydraulic system respectively across the control valve to maintain a constant flow.

The mechanical series-connected differential pressure regulator keeps the differential pressure constant across the control valve, thus maintaining constant flow. The desired maximum volumetric flow can be preset with the field adjustable flow limiter. The building automation system controller (not shown) and the actuator regulate the volumetric flow and consequently the desired temperature in buildings, rooms or zones.

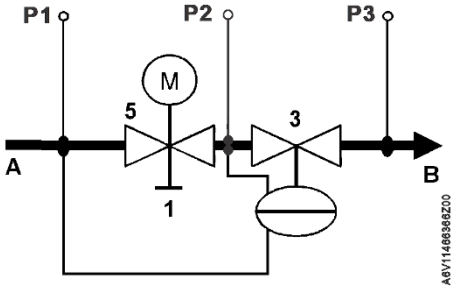

Figure 3. 599-0733X Series Pressure Independent Control Valve Operation.

A	Inlet medium (inlet port A)
B	Outlet medium (outlet port B)
1	Flow limiter with dial for presetting
3	Differential pressure regulator
5	Control valve with mounted actuator
P1	P/T port, high pressure test point (red ribbon) at the inlet port A of the PICV
P2	P/T port, low pressure test point (blue ribbon) at the outlet port of the control valve
P3	P/T port, low pressure test point (blue ribbon) at the outlet port of the PICV

Medium Flow

The medium entering the Pressure Independent Control Valve (inlet port A) first passes through the variable presetting opening (see Figures 1, 2, and 3) which is connected to the ring with a dial (1) for presetting the desired maximum volumetric flow. The actuator (M in Figure 3) opens and accurately positions the control valve. Then, the medium flows through control valve (5) with a linear characteristic.

Before leaving the Pressure Independent Control Valve (outlet port B), the medium passes through a built-in mechanical differential pressure regulator (3). This differential pressure regulator is the heart of the Pressure Independent Control Valve and ensures that the selected volumetric flow is maintained across the whole working range and independent of the inlet pressure.

Manual Control

Manual control is only possible with a mounted actuator.

Advantages

The advantages of Pressure Independent Control Valves are:

- Once the flow limiter is set to design flow, the hydronic circuit self-balances, even when changes to the system are made, such as additions.
- For any heat demand the Pressure Independent Control Valve with mounted actuator can be set to the desired volumetric flow and will remain constant regardless of pressure fluctuations in the system.

Constant flow regardless of pressure changes in the system leads to a more stable control, less wasted energy and greater comfort.

Volumetric Flow/ Dial Presetting

Tables to determine the dial setting for a desired volumetric flow.

Engineering Notes

CAUTION:

Install the valve so that the flow of the medium matches the direction of the arrow on the valve body. Failure to do so may damage the differential pressure regulator.

Recommendations

- A strainer or dirt trap should be fitted upstream of the valve to enhance reliability and service life.
- Remove dirt, welding beads, and so on from valves and pipes.
- Do not insulate the actuator bracket; air circulation must be ensured.

Mounting Notes

Pressure Independent Control Valves and actuators can be easily assembled on site. Neither special tools nor adjustments, besides the presetting, are required. Prior to mounting the actuator, the required volumetric flow must be set. Each valve is supplied with a bib tag indicating the maximum GPM flow for each setting of the flow limiter.

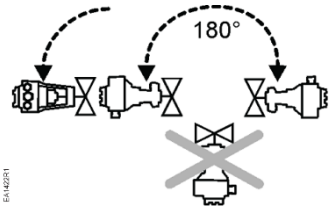

Figure 3. Accepted Mounting Positions.

Installation

- Install the valve so that the flow follows the direction of the arrow indicated on the valve body identification tag.
- For best performance, install the valve assembly with the actuator above the valve body. The valve and actuator can be installed in any position between vertical and horizontal. It is not recommended to install the valve assembly below horizontal or upside down.

For flange dimensions and bolt hole information, see *Cast Iron Flange Dimensions for 2-1/2 through 6" Valves Technical Bulletin* (155-303P25 [TB 248])

- Allow sufficient space for servicing the valve and actuator. See Table 12 for valve body dimensions, and dimensions of the service envelope recommended around the actuator.

NOTE: Instructions for field mounting an actuator, spring adjustments, wiring diagrams, and start-up are covered in the Technical Instructions and Installation Instructions for each actuator.

Presetting

It is recommended to mount the actuator before the presetting.

1. Mount the actuator in the desired orientation and tighten the valve neck coupling.
2. If using an SQV Actuator, slide the anti-rotation device over the stem with the open end guided by the actuator pillar. Do not tighten on valve stem.
3. Mount the valve stem coupling and tighten slightly.
4. Make the presetting as shown below. Do NOT adjust presetting to a dial reading lower than 0.6. Use an open-ended, 8 mm wrench to turn the stem with dial to the desired presetting position.
5. Tighten the stem coupling.
6. Using a 2.5 mm hex wrench, tighten the SQV anti-rotation device onto the valve stem.

Commissioning Notes	• The valves must be commissioned with the actuator correctly fitted. • The Pressure Independent Control Valves must be open when flushing or pressure testing the system. Strong pressure impacts can damage closed Pressure Independent Control Valves. • Differential pressure Δp_{max} across the valve's control path is not allowed to exceed 90 psi.
Maintenance Notes	The Pressure Independent Control Valves are maintenance-free. When performing service work on the valve or actuator: • Switch off the pump and disconnect the power supply. • Close the shut-off valves in the piping network. • Fully reduce pressure in the piping network and allow the pipes to cool down completely. Remove the electrical connections only if necessary.
Stem Seals	The stem seals cannot be exchanged. In case of leakage, replace the entire valve.
Warranty	Application-related technical data are guaranteed only when the valves are used in connection with the Siemens actuators. Siemens warranty is void, if used with non-Siemens actuators.
