Silver Honey™ Wound Care

The first and only Wound Care Line Utilizing
Natural, Medical-Grade Manuka Honey and MicroSilver BG™

Naturally Tough on Bacteria, Gentle on Skin

- Veterinarian-tested
- Uses natural, medical-grade active ingredients
- Proven to stop 99.9% of bacteria immediately to start healing *faster*
- Provides natural debridement of wounds
- Promotes growth of new tissue
- Moisturizes skin for optimal healing
- pH balanced
- Protects the skin's natural microbiome
- Natural neem oil repels insects
- Soothes skin, helping reduce the desire to bite and scratch.

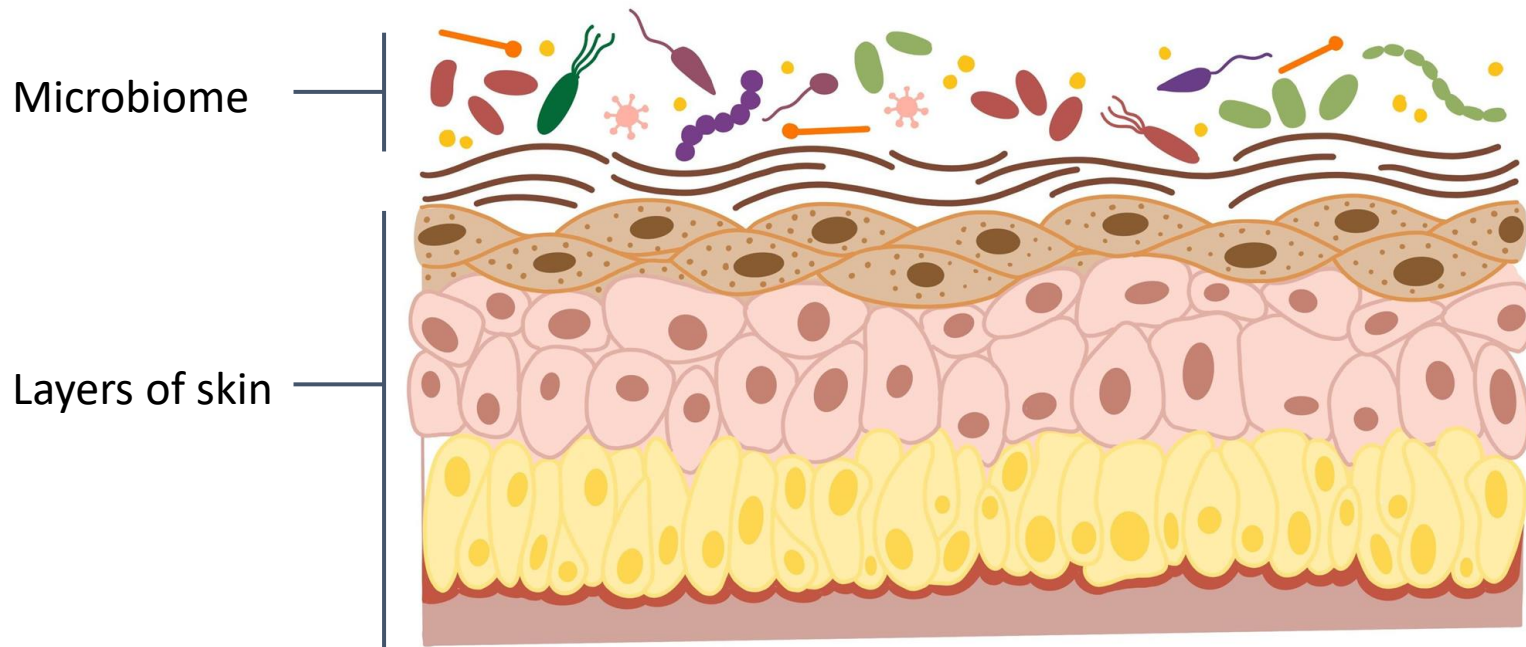

Why is the skin's microbiome important?

The skin is the largest organ. It separates internal structures from the outside world. So it should come as no surprise that microorganisms living in that world — bacteria, fungi and viruses — decide to make a home on that skin. The “microbiome” is what we call all those microorganisms living in harmony on the skin.

Research conducted in equine healing shows that equine skin microbiota or microbiome creates a rich and stable environment that is disturbed by wounding. However, it springs back to its previous, balanced state of microorganisms upon full healing of the wound.

In the presence of tissue injury, loss of microbial diversity (or a disrupted skin microbiome) often results in prolonged inflammation which can delay wound healing. Both equine and human research has shown that a balanced microbiome shortens the time it takes for wounds to heal.

MicroSilver BG™ & Manuka Honey work together to heal faster

MicroSilver BG™

Providing lasting broad-spectrum antimicrobial action, MicroSilver BG™ is a powder of micro-sized pure medical-grade silver particles.

Unlike colloidal silver, micro-sized particles provide the highest level of safety for silver used in topical healthcare, resulting in effective antimicrobial action that clings to the skin and hair follicles.

MicroSilver BG™ protects from unwanted germs while boosting the skin's natural defenses and maintaining the skin's beneficial flora.

Manuka Honey

The 5+ UMF (Unique Manuka Factor) rating certifies that the Manuka Honey we use is genuine medical-grade manuka honey gathered exclusively from New Zealand.

Manuka Honey has exceptionally high antibacterial activity and maintains a hydrated and healthy wound environment. It also encourages debridement or shedding of dead tissue from the wound.

The balanced wound environment created from the signature compounds of Manuka Honey aid in the quality and speed of healing.

Two Convenient Application Methods

Spray Gel

Designed to stay in place, Silver Honey spray gel provides continuous coverage to the wound. Its touch-free application is ideal for treating large areas of skin.

Ointment

Our longest-lasting coverage and moisturization, Silver Honey ointment is highly effective in softening older, persistent scabs to aid in removal while promoting the healing of the wound beneath.

One revolutionary wound care, multiple markets

Equine & Farm

- Effective on cuts, abrasions, sores, rain rot, rashes, fungus, scratches, sweet itch, wounds and burns
- Soothes skin
- Natural neem oil repels insects

Canine & Small Animal

- Effective on hot spots, dermatitis, cuts, abrasions, sores, rashes and lesions.
- Soothes skin, helping reduce the desire to bite and scratch.
- Prevents licking with bittering agent.
