

# M-PACT<sup>®</sup> CHEMICAL RESISTANT

## CHEMICAL RESISTANT PROTECTION

M-Pact Chemical Resistant gloves are PVC coated to prevent chemicals, oils, solvents, acids and caustics from contaminating hard working hands. Each glove is constructed with a comfortable nylon liner that is coated with Polyvinyl chloride (PVC) to provide CE EN374 Level 1 chemical resistance. Unlike standard coated gloves, M-Pact Chemical Resistant gloves provide working hands with full-coverage impact protection and durable palms double-dipped in PVC coating.

### CHEMICAL RESISTANT

PVC coated and sealed waterproofing prevents liquids and solvents from entering the gloves.

### IMPACT RESISTANT

PVC Coated Thermoplastic Rubber (TPR) protects the knuckles and fingers against impact.

## FEATURES

1. Seamless 15-gauge nylon liner.
2. PVC coated and sealed waterproofing prevents liquids and solvents from entering the gloves.
3. PVC coated Thermoplastic Rubber (TPR) knuckle and metacarpal impact protection.
4. PVC coated Thermoplastic Rubber (TPR) impact resistant finger guards.
5. PVC coated Thermoplastic Rubber (TPR) pinch point fingertip protection.
6. Double-dipped PVC palm coating provides durable gripping power in dry, oily and wet conditions.
7. Extended gauntlet cuff protects the wrist and prevents liquids from entering the glove.

## CERTIFICATIONS

## INTENDED USES

- Fueling Operations
- Mineral Processing
- Fertilizer Manufacturing
- Oil Refining
- Wastewater Processing
