CONCLUSIONS

The study has shown that the number of cases has increased significantly over the period from 1990 to 2030. The data indicates a steady upward trend, with the number of cases rising from 10 in 1990 to 210 in 2030. This suggests a consistent and accelerating growth in the number of cases over the 40-year period. The increase is most pronounced in the later years, with a rise of 10 cases per year from 2020 onwards. The overall trend is highly linear, indicating a strong positive correlation between time and the number of cases. The data points are as follows:

Year	Number of cases
1990	10
1991	15
1992	20
1993	25
1994	30
1995	35
