

Vanity Top Care & Cleaning Information

Simple care and maintenance will keep your vanity top looking beautiful for generations to come. Wiping off accumulated water will prevent mineral buildup (a whitish, dull residue on the stone), especially around the faucet holes and the bowl.

Top Care for Natural Stone

All natural stone tops are pre-sealed, however we strongly recommend the consumer apply a resin-based penetrating sealer at least every six (6) months. All natural stone is porous, and sealing fills the pores to help prevent staining liquids from penetrating. However, daily care is necessary to maintain the high quality of the stone.

Below are a few helpful care instructions for maintaining your vanity top, whether it is natural stone, engineered or cultured marble, or quartz.

Care Instructions

- Do clean surfaces with mild detergent or stone soap
- Do thoroughly rinse and dry the surface after washing
- Do blot up spills immediately
- Don't use vinegar, lemon juice or other cleaners containing acids on natural stone
- Don't use any oily product on natural stone
- Don't place hot items directly on the stone surface
- Don't place china, ceramics, silver or other abrasive objects directly on the surface as they can scratch the stone
- Don't use cleaners that contain acid such as bathroom cleaners, grout cleaners, or tub and tile cleaners
- Don't use abrasive cleaners such as dry cleansers or soft cleansers
- Don't mix bleach and ammonia; this combination creates a toxic and lethal gas
- Don't use water that exceeds temperatures of 140°F/46°C
