

# Maintenance Instructions

## Product Care

You have beautiful wood walls or ceilings in your home and want to keep them looking their best — what should be done? Follow these simple cleaning steps and your wooden boards will always look great!

We recommend cleaning be done on a regular and consistent basis to avoid a bigger cleaning job down the road and help keep elbow grease to a minimum!

- 1 Dust:** Dust with a soft cloth or dusting tool. If dusting ceiling boards, we recommend using an extension tool for ease. Regularly dusting your ceilings and walls should keep them properly cared for and clean. However, if dust has sat too long or residue is showing and dusting alone is not getting the job done — that is when you will want to wash the boards.
- 2 Wash:** Mix 1 tsp mild dish detergent with 1-gallon of warm water. Have a separate gallon of clean warm water without detergent for rinsing. Saturate a rag or sponge with the cleaning solution and wring out excess water. Make sure the rag/sponge is not too heavily saturated. Wipe down the wood in small sections with the cleaning solution. Rinse the cleaning solution off with clean warm water.
- 3 Dry:** Dry each section with a clean dry towel or cloth. Make sure that it is completely dry to maintain health and prevent staining. *Do not let the detergent or water sit or air-dry on the wood.*
- 4 Repeat:** Continue until the entire surface has been cleaned and dried.

**Pro Tip:** Don't clean your floors until you are finished with the walls and ceilings. Sweep floors *afterwards* to easily eliminate dust.

To maintain look, apply 1 additional coat of quality waterbased polyurethane at desired sheen as needed

\*Powerwashers not recommended
