Modularity

Spectra® V was designed with ease of installation and ease of maintenance in mind. Each dome system consists of three components: a back box, a dome drive, and a lower dome. These three system components are interchangeable with other Spectra V dome systems, making retrofitting and application adjustments simple. Also, dome drives and lower domes can be removed and replaced reducing maintenance time.

Back Box

Spectra V back box options include the following models: environmental pendant. The Spectra V Series can also be ordered with heavy-duty, pressurized, and stainless steel back box options (refer to the appropriate product specification sheets for more information). Each back box model features built-in **back box memory** to store camera and location-specific dome settings, including labels, presets, patterns, and zones. A **passive UTP circuit** is located on the door assembly for convenient video transmission through twisted pair wire.

Dome Drive

The Spectra V dome drive's unique **integrated optics package** incorporates many advanced features that allow the system to produce high quality video in the most difficult environments. All cameras in Spectra V dome drives feature **LowLight™** technology allowing the cameras to compensate for scenes where minimal light is present. The cameras feature built-in motion detection and advanced **WDR** that enables the system to compensate for scenes where dramatic contrasts in lighting are present.

Lower Dome

Special consideration was taken when designing the Spectra V lower dome bubble to ensure that an optimal optical relationship between the lens and bubble was achieved, providing crystal clear video at long focal lengths.

Dome Systems

Spectra V dome systems feature many software enhancements that increase performance and make configuration and operation easy. An **internal scheduling clock** allows for the scheduling of presets and patterns. **Window blanking** enables a user to configure up to eight, four-sided, user-defined privacy areas. **Password protection** prevents unauthorized users from changing the system settings. Configurable **on-screen compass and tilt display** provides positioning information when needed. Intuitive multilingual on-screen menus can be displayed in English, Spanish, Portuguese, Italian, French, German, Russian, Polish, Turkish, and Czech.

Spectra V's variable speed capabilities range from a smooth, fast pan motion of 400 degrees per second to a smooth "creep" speed of 0.1 degree per second. The system is capable of continuous 360 degrees rotation and has an **"auto flip"** feature that allows the dome to rotate 180 degrees and reposition itself for uninterrupted viewing of any subject that passes directly beneath the dome.

Durability

Pelco's **Pressurized** and **Stainless Steel** options are designed for harsh environmental installations. The Stainless Steel option meets NEMA Type 4X and IP66 standards. The components (back box and lower dome) provide added protection against corrosive conditions. The IDM4012SS mount is designed specifically for the Stainless Steel Spectra V and features an all stainless steel construction and conduit access in the bottom and back of the mount.

Pelco's **Pressurized** Spectra V option provides ultimate protection of the camera optics and electronics from moisture, corrosive gases, and airborne contaminants, meeting NEMA Type 6P and IP67 standards when installed properly. Domes are pressurized with dry nitrogen before or after installation to stabilize the internal environment. Temperature, pressure, and dew point sensors are placed inside the system to send "Alert" messages when conditions are beyond factory-set limits and allow for real time on-screen monitoring. The lower dome features an innovative single captivated fastener, O-ring seal, and a stainless steel V-band to create an easy and reliable pressure seal. Accessible on the lower dome trim ring is a Schrader valve for system purging and a pressure relief valve. The **Pressurized** Spectra V SE Series is supplied with a pre-wired cable with mating connector. The cable includes all wires for system functionality, including power, alarms, auxiliaries, coaxial video, UTP video, and serial control.
